

Statement of Reasons for proposing provision of a Toucan Crossing and reduction of the existing 50mph Speed Limit to a 30mph Speed Limit in B3208 Water Lane, Farnham

During the last financial year at the Community Infrastructure Levy (CIL) bidding cycle (07.03.23) a number of projects were approved for CIL allocation, one of which was the 'Improvements to B3208 Water Lane Roundabout, Farnham'.

The scheme proposed for Water Lane, Farnham is to install a toucan crossing just before the roundabout at its junction with A325 Farnborough where there is an existing uncontrolled pedestrian crossing and to widen one of the carriageways to three lanes with clearer road markings to improve lane discipline and ease queuing traffic.

In order to facilitate this, the speed limit signs require moving closer to the roundabout so that they don't interfere with the toucan crossing visibility.
